## Control measure - Operational risk information plan (Nature conservation sites)

---

### Control measure knowledge

Although each nature conservation site will have its own environmental damage risks which can be captured with individual operational risk plans, a set of generic action plans will also help to identify generic environmental protection action to be taken in the early stages of an incident. See Section 2.6.5, [Environmental Protection Handbook](#).

### Strategic actions

Fire and rescue services should:

- Consider introducing operational risk information plans with environmental risk notes for sites of nature conservation that are more susceptible to environmental damage. Where appropriate these plans should include:
  - Environmentally safe areas for deployments and movements of fire service resources
  - Identification of areas that are susceptible to physical environmental damage

### Tactical actions

All personnel should:

- Ensure that all relevant incident information is relayed to the incident commander
