Contents

Control measure - Safe system of work: Unstable or collapsed excavations 3

Control measure - Safe system of work: Unstable or collapsed excavations

TRAINING SPECIFICATION

Knowledge and understanding

Control measure element

Safe system of work: Unstable or collapsed excavations

Learning outcome

Understand:

- The activity requirements for an incident involving an unstable or collapsed excavation
- The safe working practices to be adopted at incidents involving unstable or collapsed excavations

Practical application

Control measure element

Safe system of work: Unstable or collapsed excavations

Learning outcome

Demonstrate the ability to:

- Use agreed safe working practices around unstable or collapsed excavations
- Seek and use appropriate advice to assess the stability of an unstable or collapsed excavation
- Put in place appropriate emergency arrangements when working in the hazard area
- Identify and communicate the type of excavation
- Identify and communicate the type, height and angle of the excavation will affect stability
